

CS699 Research Progress Report – Team Situational Awareness

Benjamin Davis

10/2/2024

In the last couple weeks for the project, I have gone through the repository of artifacts for the project. Up to this point the research I have done has consisted of reading over the main paper, exploring datasets, experimenting with the code repository and reviewing supporting documentation and papers. Following that I have started constructing a note repository that contains a collection of definitions, questions, next steps, and research links. This repository will be used to further research and hopefully enable content generation for the eventual paper creation.

Next steps for the project will include the following:

1. Meeting with Dr. Weger to discuss specifics for her groups research contributions for the project (Communication has been established but our schedules have not aligned yet)
2. Get the code repository running to generate graphics and run models
 - a. This step will enable me to better understand the dataset and components for following actions to optimize.
3. Begin learning LaTeX to create a template document
