

CS699 Research Progress Report – Team Situational Awareness

Benjamin Davis

2/28/2029

Since the last report I have created a research proposal and have started moving forward with data collection. The protect will take notional data from ChatGPT to simulate an agile software team's development process. The will consist of 8 people over the course of a 2 week sprint for 1 program increment. Following another team with the same traits but different communication processes informed from the model will be generated to create results.

Next steps for the project will include the following:

1. Update research proposal with next steps.
2. Clean data from ChatGPT
3. Begin updating models.
